From Library Journal

This work on architectural design and creativity targets both students and practitioners, clearly, albeit pedantically, articulating each phase of the design process. The first part introduces basic concepts and objective components of the design process. The next part deals with the subjective visualization inherent in sketching, modeling, and reworking. Potentially the most interesting, the third part consists of interviews with eight U.S. architects, including Steve Badanes, R. Scott Johnson, and Bart Prince. Unfortunately, the interviews, while far-ranging, tend to meander. Three hundred sketches and illustrations reinforce the book's practical, how-to orientation. A satisfactory but not essential choice for college and architecture and design libraries.

Next, you'll learn how to give shape to your ideas as you explore sketching and techniques for model building; then you'll refine your design, building on the synergism of sketching and modeling. You'll even learn how to surmount those inevitable dead ends with tried-and-true techniques from the pros. Finally, you'll learn how to package the results of your labors in a professional presentation as Miller discusses the merits and drawbacks of various presentation methods. Plus,

I should have read this book before going in to college!

By Rodrigo Thomé Cauduro

I must say this is exactly the kind of book i've been looking for, since I entered architecture school I have been trying to find literature for a good design process applied to architecture. The book covers the architectural design process from start to finish with many helpfull insights into the various stages of the complex design process involved in building. In my opinion, it is a vaery complete book, not just talking about building aspects, but client relationships, cost concerns, while at the same time realizing the diference of the academic and work reality. A must buy in my opinion.
