## **About the Author**

Ronald T. Harris received his undergraduate degree from California State University, Northridge, and both his MS and PhD degrees from the University of Southern California. In 1975, Ron was appointed to the position of Assistant Professor of Biological Sciences at the University of Southern California, where he taught human anatomy, general physiology, human embryology, and human sexuality for 20 years. In 2001 he became an adjunct professor of biology at Marymount California University, where he currently teaches human anatomy, human physiology, cell biology, and human anatomy and physiology. Ron also has extensive experience in the skin and hair care industries. He was Vice President of Research and Development at Redken Laboratories (now owned by L'Oréal USA) and a subsidiary of Shiseido Cosmetics. In these capacities, he led teams of researchers in the detailed structure and function of skin and hair. Ron's current research interests focus on the brain circuits involved in cognition and the mechanisms of memory.

Michael P. McKinley received his undergraduate degree from the University of California, and both MS and PhD degrees from Arizona State University. In 1978, he accepted a postdoctoral fellowship at the University of California at San Francisco (UCSF) Medical School in the laboratory of Dr. Stanley Prusiner, where he worked for 12 years investigating prions and prion-diseases. In 1980, he became a member of the anatomy faculty at the UCSF Medical School, where he taught medical histology for 10 years while continuing to do research on prions. During this time, he was an author or co-author of more than 80 scientific papers. Michael was a member of the biology faculty at Glendale Community College from 1991 to 2012, where he taught undergraduate anatomy and physiology, general biology, and genetics. Between 1991 and 2000, he also participated in Alzheimer disease research and served as director of the Brain Donation Program at the Sun Health Research Institute, as well as teaching developmental biology and human genetics at Arizona State University, West. His vast experience in histology, neuroanatomy, and cell biology greatly shaped the related content in Human Anatomy. He retired from active teaching in 2012 and continues to be an active member of the Human Anatomy and Physiology Society (HAPS). Michael is coauthor of the

Amazing Book!!

By elissa clary

This book was amazing! My school had recommended to use a different book, but my professor suggested this one, and I'm so glad i got it! Compared to the other books my classmates had, mine was soooooo much better! The pictures were much clearer and labeled really well. The pictures are very similar to the models in lab!! Buy this book!!!!!!

Among the clearest and most student-friendly

By matt c.

As a community college anatomy instructor, I have examined all the major undergraduate anatomy texts (and have taught from 5 different texts). This text is the clearest of them all (but with Tortora a close second). Many, many students struggle with college anatomy (nationally there's only about a 50% success rate); this book helps by being clear, direct, and its content very closely matches what most professors actually lecture on. Many other text are too long-winded, don't get to the point or state in simple terms what they are trying

to communicate to students. There are good tips for students about how to remember things. That said, the 4th edition had some minor changes that moved away from the clear, straight-forwardness of the earlier editions and the 4th edition came only 2 years after the 3rd and I have some concerns that the growing popularity of this text is sending the authors and publishers down the spiraling rabbit-hole of senseless new editions and destroying the books original strength (keeping it clear and simple) as it tries to woo more and more professors to adapt the text.
